

Who We Are:

We are an independent, grassroots organization created by patients who are suffering lasting – and in some cases, severe, life-altering effects from COVID and COVID vaccination, with little to no help due to lack of acknowledgement and denial of the harms from the health agencies. This has greatly restricted our ability to receive adequate medical care, disability, and financial support through federal vaccine injury programs. We are advocating for the recognition of COVID long-haul and vaccine-injured, so that we can access essential healthcare, and gain access to vaccine injury compensation programs. We are advocating for the recognition of long-haul COVID and vaccine injured, so that we can access essential healthcare, and gain access to vaccine injury compensation programs.

We do not exist to debate the COVID-19 vaccine program.

While we understand and acknowledge the COVID vaccines have played a role in quelling the severity of the pandemic, we also understand that all pharmaceuticals come with risk. The government is obligated to ensure that those harmed are taken care of. However, these existing government programs are broken, time is running out for those suffering and help is needed promptly. In addition to remedies for these programs, we actively seek research, medical recognition and agency accountability.

Protecting the constitution and **protecting the vulnerable** are key values that you have been willing to uphold. We ask you to join us in moving policy that will reduce our suffering.

CICP/VICP Compensation

- COVID-19 vaccines are unfortunately excluded from the Vaccine Injury Compensation Program (VICP); The Countermeasure Injury Compensation Program (CICP) has yet to pay out on a single claim for COVID vaccine injury.
- CICP/VICP details, congressional reports, etc. can be found [here](#):

CICP VICP Legislation Info
Quick Link

Recognition by the Health Agencies

- Without recognition we do not exist, we cannot access appropriate medical care, disability, or other support that we desperately need. Our lives are literally depending on it.
- ICD-10 co.=+des do not yet exist in the U.S., but exist in Europe and with the World Health Organization.

Call for Investigation/Accountability

- FDA accountability. Call for an investigation into continued lack of proper investigation of adverse events by the health agencies despite repeated calls for help.

Appropriate Funds for Research

- Free up research funds from the National Institute of Health for appropriate research to begin. Germany currently acknowledges and appropriates funds for research for Post-COVID and Post-COVID Vaccine Syndrome for etiology and treatment options.
